POLYFLUOROVINYLIDENE RESIN MEMBRANE AND METHOD FOR PRODUCTION THEREOF

(57) Abstract:

PURPOSE: To obtain a polyfluorovinylidene resin membrane, on whose surface the proteinaceous physiologically active substance is hardly adsorbable and which is excellent in hydrophilic character and free from static electricity.

CONSTITUTION: A

polyfluorovinylidene resin membrane free from static electricity, having a high hydrophilic characteristic and blended with a cellulose derivative or cellulose having a hydroxylation rate of from 80 to less than 100% is characterized by hydrolyzing the cellulose derivative after the formation of the membrane from a mixed solution containing the polyfluorovinylidene resin and the cellulose derivative.
